

*filax*OPS – the innovative information system for perioperative irrigation

NEW

***filax*OPS**

 **FILAX**
MEDICAL

No more stress over interruptions in irrigation during endourological procedures

filaxOPS reminds the nursing staff of upcoming bag changes during procedures in the operating theatre

filaxOPS is a digital system which indicates when a change of bag is necessary. A countdown function tells the nursing staff how long it is before the next change of irrigation bag. Optical and/or acoustic notifications are given when the preset threshold values are reached.

Whether as an integral part of a ceiling hoist, as a simple infusion stand or as a modern hoist model with electric height adjustment, all versions of the filaxOPS are easy to integrate into your operating theatre.

Advantages in everyday clinical practice *

- Advantages in everyday clinical practice *
- Prognosis and planning for bag changes with threshold values that you can choose yourself
- Information on irrigation situations available at the infusion stand and remotely
- Takes pressure off the doctor and nursing staff during surgery
- Operates independently of the power network
- Documents fluid consumption

Welcome to Filax Medical AG, your Swiss partner for advanced digital solutions in urology

Our company's mission is to revolutionise postoperative transurethral irrigation after urological procedures. With our pioneering spirit, professional commitment and outstanding ingenuity, we are setting new standards in medical technology.
